

# EOK&TOPASIA SHOCK ABSORBER

EOK SPECILIZE IN SHOCK ABSORBER  
WITH 30

# Shock Absorber

## The structure of the shock absorber

The shock absorber consists of a piston valve and a foot valve that generate damping force, the cylinder body, and storage pipe that stores oil and gas (air), the connecting rod that transmits the movement of the vehicle body, and the oil seal that prevents leakage of internal gas or oil.

Based on the piston valve, the upper part is called the upper piston chamber, the lower part is called the lower piston chamber, the storage pipe, and the cylinder.

The space between the bodies is called the storage room. The upper and lower chambers of the piston are always filled with oil, the lower layer of the storage chamber is filled with oil, and the upper layer is filled with air or gas (nitrogen).

## EOK&TOPASIA KEEPS WORKING LONG AFTER THE JOB IS DONE

Quality components, precision engineering and a durable, robust design ensure top performance throughout the life of Road Choice heavy-duty shock absorbers, and reduce wear and tear on other costly suspension parts.

### Drawn over Mandrel (D.O.M.) Inner Cylinder Tube

- Provides smooth surface on inner cylinder for piston seal and piston bearing face
- Less chance of scoring and better durability

### Chromed Piston Rods

- Provides superior corrosion resistance, performance and product life durability

### Bulged Design\*\*

- Increased fluid capacity
- Lower operating temperatures
- Dissipates heat and reduces internal

### Pressurized, Floating Piston Seal Design

- Pressurized, Floating Piston Seal Design
- Self compensates for wear over shock life
- Rugged and durable design
- Less fade, more consistent performance over the full rangewear

### Forged Solid Steel Eye Rings and 360° Arc-Welded End Mounts\*

- Greater tensile strength
- Reduces end mount failures

### Triple Lip, Nitrile Rod Seal

- Extra seal protection improves fluid retention
- Leads to longer product life

### Hydraulic Extension Stop<sup>1</sup>

- Unique and robust design
- Prevents shocks from topping out and suspensions from over-extending
- Significantly reduces fatigue in mounts, lights and other vibration sensitive components

### 10 Stage All Coil Spring Valving

- For comfort and control
- Enhanced durability
- Self-cleaning

# Shock Absorber

SICHUAN EOK AUTO INDUSTRY CO.,LTD

## The function of the shock absorber

1: Shock absorbers are used to eliminate vibrations from road input. The mechanical energy of the spring is converted into heat energy by the fluid, and the heat energy is dissipated into the air through the medium, to optimize the vehicle motion, give the driver a sense of comfort and stability, and to help improve the driving stability.

### 2: The shock absorbers suppress large vibrations transmitted to the body while driving to improve ride comfort.

- Shocks delivered to the driver and passengers are cushioned to improve ride comfort and reduce fatigue of passengers.

- Protect the loaded cargo.

- Extend car body life and prevent spring from being damaged.

### 3: The rapid vibration of the wheels while driving is suppressed to prevent the tires from leaving the road, thus improving the driving grip.

- Improve driving stability and adjustability.

- Efficiently transmits engine detonation pressure to the ground to save fuel costs.

- Improve braking effect.

- Extend the life of each part of the car body and save the maintenance cost.

## EOK&TOPASIA ABSORBER SUPPORT

### 1. One-stop sourcing solution for shock absorbers

EOK has a full range of products, including car shock absorbers, mini car shock absorbers, truck shock absorbers, modified car shock absorbers, suspension assemblies, CDC shock absorbers (inductance adjustable), air spring inductance shock absorbers assembly, shock absorber repair kit and other accessories are available for customers to choose.

### 2. Highly customized:

Highly customized products can be realized according to the customer's region, requirements, target customers, etc.

(1):In rainy and humid areas with more mountains, the impact resistance (durability) and corrosion resistance requirements of the product are higher than in other areas. Then EOK&TOPASIA® can do special coating treatment according to the needs of customers so that your shock absorber will still be as bright as new after long-term use.

(2):In some areas, the winter is particularly cold, even reaching minus 20-40 degrees Celsius, so the conventional shock absorber oil may freeze in winter (after a night outside in winter, the shock absorber will emit some abnormality when the vehicle is started in the morning. noise, which will seriously affect the customer experience). EOK&TOPASIA® can provide low-temperature resistant oil according to customer needs to avoid this situation (the oil is divided into 5w-20/5w-40 based on temperature considerations)

(3):Products can be customized according to the consumer's requirements, such as thickening the wall thickness of the shock absorber, thickening the shock absorber, heavier, spray color, and other special needs customized products.

### 3. Appearance

(1):The appearance of our products is paint treatment, the appearance is smooth, and the corrosion resistance effect is good.

(2):The welding bead is smooth and the welding strength is high. The appearance is almost free of large particles of welding slag.

Image 1: Painted Appearance

image 2: Appearance of the weld bead

# Shock Absorber

## 4.Performance

(1):EOK&TOPASIA® tests two-speed points on the damping force of the product, and other companies test almost one-speed points, thus ensuring the stability of the force value and the consistency of the original factory

(2) :EOK&TOPASIA® measures the inflation force value once during the production process, and measures it again before packaging to ensure that the product rebuttal force meets the technical specifications. (Appropriate rebuttal force can improve the stability of the damping force and reduce the noise of the shock absorber)

(3) :EOK&TOPASIA® will randomly select shock absorbers for a muddy water test and durability test to ensure the qualified rate of products.

(4) EOK&TOPASIA® uses HIRI's SV-3 oil, which has better comprehensive performance

(5)EOK&TOPASIA® uses RFX, and NOK oil seals can be selected according to your requirements.

common failures	symptoms	possible reasons	solutions
Oil-leakage	The body shakes for too long when crossing the pit	Oil seal damaged or failed due to expiration	Replace shock absorbers
Undamped or one-way undamped	The body shakes for too long when crossing the pit	Foot valve or piston damaged	Replace shock absorbers
Abnormal noise when crossing the undulating road		Mounting bolts not be fixed	Check the bolts
Piston rod eccentric wear	Oil-leakage	Excessive accumulation of sediment at the piston rod, or long service life, resulting in eccentric wear	Replace shock absorbers
The shock absorber is unable to be pressed down	The sudden obvious shock when crossing the pit	Shock oil failure due to expiration	Replace shock absorbers
The shock absorber bending		Shock absorber damaged due to large impact	Replace shock absorbers
The buffer block is aging (the powder will fall off in one wipe)		Aging of the buffer block	Replace the installation package
Steering noise	Abnormal noise when steering	Disassemble the assy to check if the bearing is damaged or not installed	Check the assembly

**When the car body is prohibited from moving, press the front or rear of the car, then let go, the car body will move up and down 3 times, and then keep it flat. Stable indicates that the damping of the shock absorber is effective.**
